#### **READ THE FOLLOWING DIRECTIONS CAREFULLY**

1. In addition to this test booklet, you should have an answer sheet.

- 2. Each item in this test has four suggested answers, lettered (A), (B), (C), (D). Read each item you are about to answer, and decide which choice is best.
- 3. On your answer sheet, find the number which corresponds to your item and blacken the space having the same letter as the answer you have chosen. Look at the sample item below.

Sample Item

The expression  $(1 + \sqrt{3})^2$  is equivalent to

Sample Answer

- (A) 4
- (B) 10
- (C)  $1 + 3\sqrt{3}$
- (D)  $4+2\sqrt{3}$

The best answer to this item is "4 + 2  $\sqrt{3}$ ", so answer space (D) has been blackened.

- 4. If you want to change your answer, erase your old answer completely and fill in your new choice.
- 5. When you are told to begin, turn the page and work as quickly and as carefully as you can. If you cannot answer an item, omit it and go on to the next one. You can return later to the item omitted.
- 6. You may do any rough work in the booklet.
- 7. This test consists of 45 items. You will have 90 minutes to answer them.
- 8. You may use silent non-programmable calculators to answer questions.
- 9. Do not be concerned that the answer sheet provides spaces for more answers than there are items in this test.

(a) Let 
$$f(x) = 2x^3 + px^2 + qx + 2$$
  
(i)  $f(-1) = 0 \Rightarrow -2 + p - q + 2 = 0 \Rightarrow p = q$  (1 mark)  
 $f\left(\frac{1}{2}\right) = 0 \Rightarrow \frac{1}{4} + \frac{p}{4} + \frac{q}{2} + 2 = 0 \Rightarrow p + 2q = -9$  ([2 mark)  
 $\Rightarrow p = q = -3$  (1 mark)  
(ii)  $f(x) = (2x - 1)(x + 1)(x - k)$  (1 mark)  
 $\equiv 2x^3 + px^2 qx + 2$   
 $\Rightarrow k = 2$   
 $\Rightarrow \text{ the remaining root is 2}$  (1 mark)  
(b) Let  $p_n$  be the statement  $\sum_{r=1}^{n} (6r + 5) = n (3n + 8)$   
For  $n = 1$ , L.H.S.  $p_n$ , is  $6 + 5 = 11$  and R.H.S. of  $p_n$   
 $= 1(3 + 8)$   
 $= 11$  (1 mark)  
So  $p_n$  is true for  $n = 1$  (1 mark)

Assume that  $p_n$  is true for n = k, i.e

 $11 + 17 + \dots + (6k + 5) = k(3k + 8) \dots I$ 

Then, we need to prove  $p_n$  is true for n = k + 1, i.e from I above From I,

$$11 + 17 + ... + (6k + 5) + [6(k + 1) + 5] = k (3k + 8) + [6(k + 1) + 5]$$
(2 marks)  
$$= 3k^{2} + 8k + 6k + 6 + 5$$
  
$$= 3k^{2} + 14k + 11$$
  
$$= (3k + 11) (k + 1)$$
(2 marks)

$$\therefore 11 + ... + 6k + 5 + [6 (k + 1) + 5] = (k + 1) [(k + 1) + (k + 1) + (k + 1) + 8]$$
  
= (k + 1) [3 (k + 1) + 8] (1 mark)

Thus, if 
$$p_n$$
 is true when  $n = k$ , it is also true with  $n = (k + 1)$ ;(1 mark)i.e.  $\sum_{r=1}^{n} (6r + 5) = n (3n + 8) \forall n \in N$ (1 mark)[10 marks]

(c) (i)

Let h be height t hr after the flooding started.

$$\frac{dh}{dt} = 14 - 13t \tag{1 mark}$$

$$\frac{dh}{dt} = 14 - 13t \implies h = 14t - \frac{3t^2}{2} + \text{constant}$$
(1 mark)  
$$h = o \text{ at } t = 0 \implies h = 14t - \frac{3t^2}{2}$$
(1 mark)

$$\frac{dh}{dt} = 0 \qquad \Rightarrow t = \frac{14}{3}$$
$$\frac{d^2h}{dt^2} = -3 \text{ so at } t = \frac{14}{3}, h \text{ max occurs.}$$

(ii) 
$$h_{\text{max}} = 14\frac{14}{3} - \left(\frac{3}{2}\right)\left(\frac{14}{3}\right)^2$$
  
=  $\frac{196}{6}$   
=  $32\frac{2}{3}$  inches

At the step, h=2ft 6 in.

 $\Rightarrow 3t^2 - 28t + 60 = 0$  $\Rightarrow (3t - 10)(t - 6) = 0$ 

 $\Rightarrow t = \frac{10}{3} \text{ or } t = 6$ 

 $\Rightarrow t=3\frac{1}{3}$
